Acute respiratory distress syndrome - Wikipedia
Acute respiratory distress syndrome (ARDS) is a type of respiratory failure characterized by rapid onset of widespread inflammation in the lungs. Symptoms include shortness of breath, rapid breathing, and bluish skin coloration. Among those who survive, a decreased quality of life is relatively common.

Acute Respiratory Distress Syndrome - Healthline
Acute respiratory distress syndrome (ARDS) is a severe lung condition. It occurs when fluid fills up the air sacs in your lungs. Too much fluid in your lungs can lower the amount of oxygen or increase the amount of carbon dioxide in your bloodstream.

Adult respiratory distress syndrome | definition of adult ...

Adult respiratory distress syndrome (ARDS), also called acute respiratory distress syndrome, is a type of lung (pulmonary) failure that may result from any disease that causes large amounts of fluid to collect in the lungs.

What Is Acute Respiratory Distress Syndrome (ARDS)?

Acute Respiratory Distress Syndrome, or ARDS, is a condition that causes fluid to leak into your lungs, blocking oxygen from getting to your organs. It is serious, sometimes life-threatening, and
