[Animal migration - Wikipedia](#)

Animal migration is the relatively long-distance movement of individual animals, usually on a seasonal basis. It is the most common form of migration in ecology. It is found in all major animal groups, including birds , mammals, fish , reptiles, amphibians, insects , and crustaceans. [1]

[Animal navigation - Wikipedia](#)

Animal navigation is the ability of many animals to find their way accurately without maps or instruments. Birds such as the Arctic tern , insects such as the monarch butterfly and fish such as the salmon regularly migrate

thousands of miles to and from their breeding grounds, [1] and many other species navigate effectively over shorter distances.
