assumptions with regard to primary prevention. Recently, the report Cancer in The Netherlands [5], changes in incidence rates and enhanced survival describing scenarios for cancer epidemiology and rates due to earlier diagnosis and improved therapy, cancer control in the period 1985-

2000, was published. The most likely developments in incidence and prevalence are shown in Tables 1 and 2; the **Cancer in The Netherlands: From scenarios to health policy ...**

Future scenarios on cancer in The Netherlands were made with the help of existing trends, demographic changes and expected developments in cancer research, prevention, screening and treatment. Until the year 2000, cancer incidence will probably increase by 1.5% per year, by nearly 3% per year and the need for health care facilities accordingly.
