[Neuron action potentials: The creation of a brain signal ...](#)

When the brain gets really excited, it fires off a lot of signals. How quickly these signals fire tells us how strong the original stimulus is - the stronger the signal, the higher the frequency of action potentials. There is a maximum frequency at which a single neuron can send action potentials, and this is determined by its refractory periods. [Mild chronic cerebral hypoperfusion induces neurovascular ...](#)

Results. By using C57BL/6J mice subjected to right common carotid artery (rCCA) permanent ligation in order to induce mild chronic cerebral hypoperfusion, we show here that cerebral hypoperfusion induced NVU

dysfunction by reducing ABCB1 protein expression in brain capillaries.

#### **Pain Signals to the Brain from the Spine - Spine-Health**

The Brain. Once a pain signal reaches the brain, a number of things can happen. Certain parts of the brain stem (which connects the brain to the spinal cord) can inhibit or muffle incoming pain signals by the production of endorphins, which are morphine-like substances that occur naturally in the human body.
