Computer Memory & Data Representation Computer uses a fixed number of bits to represent a piece of data, which could be a number, a character, or others. A n -bit storage location can represent up to 2^n distinct entities.

[Division by zero - Wikipedia](#)

In mathematics, division by zero is division where the divisor (denominator) is zero. Such a division can be formally expressed as $a / 0$ where a is the dividend (numerator). In ordinary arithmetic, the expression has no meaning, as there is no number which, when multiplied by 0, gives a (assuming $a \neq 0$), and so division by zero is undefined.
