Controlling the flow properties of drilling fluids and cement slurries is vital to efficient drilling operations. This valuable manual provides a fundamental understanding of these flow, or rheological, properties by describing the general principles that determine the rheological parameters of drilling fluids and cement slurries.

Spacers and Flushes - Halliburton

Spacers and preflushes separate cement slurry and drilling mud by displacing drilling fluid from the annulus and acting as a barrier between the two, improving the odds of returning uncontaminated mud to the surface and achieving a solid cement job.
