Estimation of Mortality Rates in Stage-Structured ...

The central theme in this book is a somewhat complex algorithm for mortality estimation (detailed at the end of Chapter 4). Because of its complexity, the job of implementing the method is intimidating. Any reader interested in using the methods may obtain copies of our code as follows: *Intelligible Structured Code 1*. Hutchinson and deHoog's algorithm for fitting smoothing splines by cross

Estimation of mortality for stage-structured zooplankton ...

Estimation of zooplankton mortality rates in field populations is a challenging task that some contend is inherently intractable. This paper examines several of the objections that are commonly raised to efforts to estimate mortality. We find that there are circumstances in the field

where it is possible to sequentially sample the same population and to resolve biologically caused mortality

Estimation of the mortality rate functions from time ...

The estimation of the mortality rate function for a stage-structured population is obtained starting from time-series field data on the abundance of the species. The method is based on the formulation of the mortality as a combination of cubic splines and it is applied to the case of *Lobesia botrana*, the main pest in the European vineyards, with data collected in a location in the North of

The problem addressed is one of the classics of statistical ecology, the estimation of mortality rates from stage-frequency data, but in tackling it we found ourselves making use of ideas and techniques very different from those we expected to use, and in which we had no previous experience. Specifically we drifted towards consideration of some rather specific curve and surface fitting and
