[Flash floods - NOAA National Severe Storms Laboratory](#)

Flash floods are the most dangerous kind of floods, because they combine the destructive power of a flood with incredible speed and unpredictability. Flash floods occur when excessive water fills normally dry creeks or river beds along with currently flowing creeks and rivers, causing rapid rises of water in a short amount of time. They can happen with little or no warning.

[What causes flash floods? - Met Office](#)

What are flash floods? Flash flooding happens when Rain and rainfall in the UK falls so fast that the underlying ground cannot cope, or drain it away, fast enough. Roads can become like rivers and if there is a lot of water, it can flood buildings and carry cars away.

Watch How Flash Floods in Israel are Quick and Deadly

Flash floods in the Judean desert are deadly. If you are caught in a valley, the gushing waters appear out of nowhere and carry everything in its way as it plunges down towards the Dead Sea area, the lowest point on earth.

What Causes Floods | Flood | Drought

Flash floods can occur almost anywhere there is a relatively short intense burst of rainfall such as during a thunderstorm. As a result of these events the drainage system has insufficient capacity or time to cope
