Heat Pumps | Pool Supplies Canada

Heat Pumps are energy efficient electric pool heaters, that work by transferring heat from the surrounding air into the pool water, rather than generating heat themselves. In terms of energy used to heat they typically are more efficient then a gas powered heater. These units require temperatures above 10 degrees Celcius to perform efficiently.

Gas Pool Heater vs. Pool Heat Pump | What is the Difference?

What is the difference between a Pool Heater and a Pool Heat Pump? Heat pumps operate differently by using electricity to capture heat and move it from one place to another and do not generate heat like a gas or propane heater.

How Pool Heat Pumps Work | Poolheatpumps.com

How Do Pool Heat Pumps Work? A pool heat pump uses electricity to operate and also uses the sun-warmed air which contributes to the efficiency of the unit. Heat Pump Pool Heaters use electricity and do not generate heat. As the

Amazon.ca: pool heat pump
