Pulmonary Hypertension Clinic | UCSF Medical Center

Pulmonary hypertension (high blood pressure in the lungs) is a rare and serious blood vessel disorder of the lungs, affecting one or two people in a million.

CV Physiology: Primary (Essential) Hypertension

Despite many years of active research, there is no unifying hypothesis to account for the pathogenesis of primary hypertension. There is a natural progression of this disease that suggests early elevations in blood volume and cardiac output might initiate subsequent changes in the systemic vasculature (increased resistance).
