FACT SHEET Infectious causes of cancer KEY MESSAGES

1 FACT SHEET Infectious causes of cancer KEY MESSAGES 3.3% of all cancers in Australia can be attributed to infectious agents. Cancers caused by infectious agents are more prevalent in developing regions of the

Risk Factors: Infectious Agents - National Cancer Institute

Certain infectious agents, including viruses, bacteria, and parasites, can cause cancer or increase the risk that cancer will form. Some viruses can disrupt signaling that normally keeps cell growth and proliferation in check.

Infectious causes of cancer and their detection

How infectious agents cause cancer. The major mechanisms by which infectious agents can promote and maintain tumor formation can be divided broadly into three main categories (Figure (Figure2). 2). The first is the induction of chronic inflammation as a result of a continuing immune response to a persistent infection. This occurs, for example, in the case of hepatitis C virus (HCV), associated

Infectious Causes of Cancer: Targets for Intervention ...

"Infectious Causes of Cancer is intended as an introduction to infectious disease oncology for practitioners, but is also an excellent and valuable reference work of general interest to oncologists, microbiologists, and infectious disease specialists, and should be included in any medical biology or oncology library." -ASM News

Category:Infectious causes of cancer - Wikipedia

Some infectious agents are linked to increased risk of cancer in their host organisms. The articles in this category
