The coiled wire will generate a magnetic field when an electric current passes through it, however, the magnetic field disappears the moment the current stops.

Electromagnets need electricity to work. Their usefulness lies in the ability to vary the strength of the magnetic field

through controlling the electrical current in the wire.

What Metals Are Magnetic? | Reference.com

Nickel, iron and cobalt are magnetic metals. Most other metals, including gold, copper, silver and magnesium, are generally not magnetic, although some of these metals might become slightly magnetic if placed in a magnetic field.

Magnetic Properties of Materials - Study Material for IIT ...

Magnetic Properties of Materials, Magnetic Field: The magnetic field is an imaginary line of force around a magnet which enables other ferromagnetic materials to get repelled or attracted towards it. The magnetic field lines are formed due to various reasons like orbital movement of electrons.

Rare-earth element - Properties of the metals | Britannica.com

Magnetic properties The magnetic properties of the rare-earth metals, alloys, and compounds are very dependent on the number of unpaired 4f electrons. The metals that have no unpaired electrons (scandium, yttrium, lanthanum, lutetium, and divalent ytterbium) are weakly magnetic, like many of the other non-rare-earth metals.

Magnet - Wikipedia

A magnet's magnetic moment (also called magnetic dipole moment and usually denoted μ) is a vector that characterizes the magnet's overall magnetic properties. For a bar magnet, the direction of the magnetic moment points from the magnet's south pole to its north pole, [9] and the magnitude relates to how strong and how far apart these poles are.

What Are Magnetic Metals? | Apex Magnets Blog

What Are Magnetic Metals? This entry was posted on March 14, 2015 by Apex Magnets. It is common knowledge that magnets attract metals but not all metals. Some metals contain certain properties that make them more magnetic than others. One metal that is highly magnetic is iron. What are the other types of magnetic metals? There are three main types of magnetic metals: ferromagnetic

Magnetism - Wikipedia

Magnetism is a class of physical phenomena that are mediated by magnetic fields. Electric currents and the

magnetic moments of elementary particles give rise to a magnetic field, which acts on other currents and magnetic moments.
