Cardiac myofibrillogenesis inside intact embryonic hearts ...

How proteins assemble into sarcomeric arrays to form myofibrils is controversial. Immunostaining and transfections of cultures of cardiomyocytes from 10-day avian embryos led us to propose that assembly proceeded in three stages beginning with the formation of premyofibrils followed by nascent myofibrils and culminating in mature myofibrils.

Myofibrillogenesis in Skeletal Muscle Cells in Zebrafish

The premyofibril model of myofibrillogenesis, based on observations in cultured avian muscle cells, proposes that mature myofibrils are preceded by two intermediary structures: premyofibrils and nascent myofibrils. To determine if this model applies to zebrafish skeletal muscle development, we

The beta-lactamase domain of MRI shows similarities to HAGH. However, in cells and *Drosophila*, Shen et al. (2011) found that the long isoform of MRI could not effectively restore absent HAGH activity, suggesting that MRI does not hydrolyze S-D-lactoyl-glutathione (SLG) at appreciable levels in vivo.
