Noninvasive physiologic vascular studies allow evaluation of the physiologic parameters of blood flow through segmental arterial pressures, Doppler waveforms, and pulse volume recordings to determine the site and severity of lower extremity peripheral arterial disease.

Noninvasive Peripheral Arterial Diagnosis - INFONA

Various noninvasive vascular diagnostic techniques have been described in the past four decades to help the clinician in the management of vascular patients. Although many physicians still rely entirely upon arteriography as the main tool for evaluation of peripheral arterial occlusive disease, the role of the vascular laboratory cannot be denied. These techniques should remain as a valuable
