Plant growth can be determinate or indeterminate, meaning

some plants will have a cycle of growth then a cessation of growth, breakdown of tissues and then death (think of a radish plant or a tomato plant) while others (think of a giant cedar tree) will grow and remain active for hundreds of years. A tomato plant is fairly predictable and is said to have determinate growth, while the cedar

#### **Plant hormones**

Plant hormones, also known as plant growth factors, are chemical substances that accelerate, inhibit or otherwise affect growth. This animation looks at how the action of indole-3-acetic acid (IAA)
