What is the difference between == and = in Prolog? - Stack ...

The = "operator" in Prolog is actually a predicate (with infix notation) =/2 that succeeds when the two terms are unified. Thus $X = 2$ or $2 = X$ amount to the same thing, a goal to unify X with 2. The == "operator" differs in that it succeeds only if the two terms are already identical without further unification.

Prolog vs Prologue - What's the difference? | WikiDiff

As nouns the difference between prolog and prologue is that prolog is a speech or section used as an introduction, especially to a play or novel while prologue is a speech or section used as an introduction, especially to a play or novel.
