Red Blood Cells: Function and Structure - ThoughtCo
Red blood cells are derived from stem cells in red bone marrow. New red blood cell production, also called erythropoiesis, is triggered by low levels of oxygen in the blood. Low oxygen levels can occur for various reasons including blood loss, presence in high altitude, exercise, bone marrow damage, and low hemoglobin levels.

Red Blood Cells Functions, Size, Structure, Life Cycle ...

Any disruption of the red blood cells, its quantity, shape, size, structure or life cycle can therefore affect the oxygen-carrying capacity of the blood. Functions of Red Blood Cells Apart from carrying oxygen, which is the main function of red blood cell, it can also conduct the following functions:

Red Cell Structure and Its Breakdown - ResearchGate
In writing this chapter for Protoplasmatologia, I have tried to confine the material to a consideration of the problems of the red cell and its breakdown as they appear at the moment.
