### Ribozyme - Wikipedia

Ribozymes (ribonucleic acid enzymes) are RNA molecules that are capable of catalyzing specific biochemical reactions, similar to the action of protein enzymes.

### What are Ribozymes? - News Medical

A ribozyme is a ribonucleic acid (RNA) enzyme that catalyzes a chemical reaction. The ribozyme catalyses specific reactions in a similar way to that of protein enzymes. Also called catalytic RNA

Ribozymes can be engineered to suppress the expression of genes, such as those that promote cancer or those from pathogenic viruses. The ribozyme catalytic core is linked to a sequence that recognizes the target gene mRNA, usually an antisense probe, thus combining the two strategies (Fig. 5.29).

### Ribozymes: Catalytic RNAs that cut things, make things ...

Catalytic RNAs, or ribozymes, are a fossil record of the ancient molecular evolution of life on Earth and still provide the essential core of macromolecule synthesis in all life forms today. Are they also an avenue to the development of new catalysts to recreate evolution, or to use as therapeutics?

### Ribozymes | Article about Ribozymes by The Free Dictionary

Ribozyme. A ribonucleic acid (RNA) molecule that, like a protein, can catalyze specific biochemical reactions. Examples include self-splicing rRNA and RNase P, both involved in catalyzing RNA processing reactions (that is, the biochemical reactions that convert a newly synthesized RNA molecule to its mature form).

### Ribozyme - definition of ribozyme by The Free Dictionary

Nilesh Vaidya and Niles Lehman made a system of halved ribozymes which could form hybrid ribozymes combining the recognition site of one with the catalytic site of another in a Mg<sup>++</sup> solution and found the spontaneous emergence of a single autocatalytic hybrid ribozyme, then loops of 3, 5 and 7 collectively autocatalytic hybrid ribozymes.

### Ribozyme - an overview | ScienceDirect Topics

Ribozymes are advantageous over traditional antisense technology since they are not consumed during target cleavage reaction and several target molecules are inactivated by single ribozyme. These ribozymes are highly efficient catalytic molecules even at low concentrations.

### Ribozyme | Encyclopedia.com

**Ribozyme.** Ribozymes are RNA molecules that catalyze chemical reactions. Most biological processes do not happen spontaneously. For example, the cleavage of a molecule into two parts or the linkage of two molecules into one larger molecule requires catalysts, that is, helper molecules that make a reaction go faster.

Researchers have isolated a specific site in these viroids responsible for the process of self-cleavage. The site is less than 30 nucleotides long and consists of three stems coming off a central loop.

#### **Ribozyme - Biology-Online Dictionary | Biology-Online**

...

Ribozymes are RNA enzymes that catalyze certain biochemical reactions, such as in the aminotransferase activity of the ribosome and in the cleavage (or ligation) of its own or another RNA.

#### **Ribozyme | definition of ribozyme by Medical dictionary**

Ribozymes are found in EUCARYOTES, PROKARYOTES, VIRUSES and VIROIDS. ribozyme enzyme whose catalytic function is carried out by an RNA subunit; of the four known classes, three carry out self-processing reactions while the fourth, ribonuclease P (RNase P), is a true catalyst; discovered in the context of RNA splicing.
