Signaling in Plants. In plants, as in animals, cells are in constant communication with one another. Plant cells communicate to coordinate their activities in response to the changing conditions of light, dark, and temperature that guide the plant's cycle of growth, flowering, and fruiting. **Signalling and Communication in the Actinorhizal Symbiosis ...**

Part of the Signaling and Communication in Plants book series (SIGCOMM, volume 11) Abstract More than 200 species of non-legume dicotyledonous plants, mostly trees and shrubs, belonging to eight different families and 24 genera can enter actinorhizal symbioses with the nitrogen-fixing actinomycete Frankia.

Plant Microbe Communications for Symbiosis | Plant and ...

The cellular signaling networks that determine RN and AM symbioses overlap in legumes, suggesting that the molecular components of the legume-specific networks are shared with other plant-associated microbes.

Frontiers | Actinorhizal Signaling Molecules: Frankia Root ...

Actinorhizal plants are able to establish a symbiotic relationship with Frankia bacteria leading to the formation of root nodules. The symbiotic interaction starts with the exchange of symbiotic signals in the soil between the plant and the bacteria. This molecular dialogue involves signaling molecules that are responsible for the specific **Plant Communication from an Ecological Perspective ...**

This book shows the complexity of plant signaling and behavior in an ecological context and is intended to increase our understanding of it. It reflects the multifaceted interactions between plants and other organisms that affect their growth and development.
