[Modeling the Distribution of Geodia Sponges and Sponge ...](#)

Introduction. Sponges form an ancient group of sessile filter-feeders characterized by a body plan built around a system of canals through which water is pumped, supplying food and oxygen and removing waste . In the deep sea, sponges enhance both local nutrient and energy exchange and biodiversity [3-5].

[Redescription of Phymolepis cuifengshanensis \(Antiarcha ...](#)

Background. Yunnanolepidoids constitute either the most basal consecutive segments or the most primitive clade of antiarchs, a highly diversified jawed vertebrate group from the Silurian and Early Devonian periods.
