Theories of Immune Networks | Snaplit

For a long time, immunology has been dominated by the idea of a simple linear cause-effect relationship between the exposure to an antigen and the production of specific antibodies against that antigen. Clonal selection was the name of the theory based on this idea and it has provided the main concepts to account for the [ ]

### **The Basics of the Immunological Theory of Aging**

The immunological theory of aging asserts that the process of human aging is, in fact, a mild and generalized form of prolonged auto-immune phenomenon. Simply put, the theory holds that the rate of aging, a highly complex series of processes, is largely controlled by the immune system .

### **Immune network theory - Wikipedia**

The immune network theory is a theory of how the adaptive immune system works, that has been developed since 1974 mainly by Niels Jerne and Geoffrey W. Hoffmann. [2] [3] The theory states that the immune system is an interacting network of lymphocytes and molecules that have variable (V) regions.
