Whole Genome Amplification Overview - QIAGEN
Researchers often face the problem of limited or insufficient DNA quantity for downstream analysis. QIAGEN's whole genome amplification technology solves this problem by providing high yields of whole genomic DNA from small or precious samples, including single cells.

Whole Genome Amplification | NEB

Whole Genome Amplification (WGA) is a method for robust amplification of an entire genome, starting with nanogram quantities of DNA and resulting in microgram quantities of amplified products.

Whole Genome Amplification - Sigma-Aldrich

The GenomePlex Whole Genome Amplification (WGA) product line provides a robust and accurate method of amplifying nanogram quantities of starting material into microgram yields with minimal allele drop out.
